CARTRIDGE CORPORATION

International Cartridge Corporation is dedicated to the manufacture of *Frangible Ammunition*.

We are aware of the pending environmental regulations of lead-based ammunition and we are the first company to dedicate our manufacturing exclusively to lead-free ammunition. Our staff includes professionals with extensive experience within the ammunition industry, research and development engineers, military and law enforcement professionals, university instructors, and certified firearm instructors.

Our professionals manufacture ammunition on modern production equipment. Manufacturing processes are controlled using SPC (statistical process control) data collection systems during critical manufacturing and material handling operations. Manufacturing operations have expanded and a new facility was opened. It includes a ballistic testing facility, indoor/outdoor training and testing range, and a live-fire mobile demonstration unit.

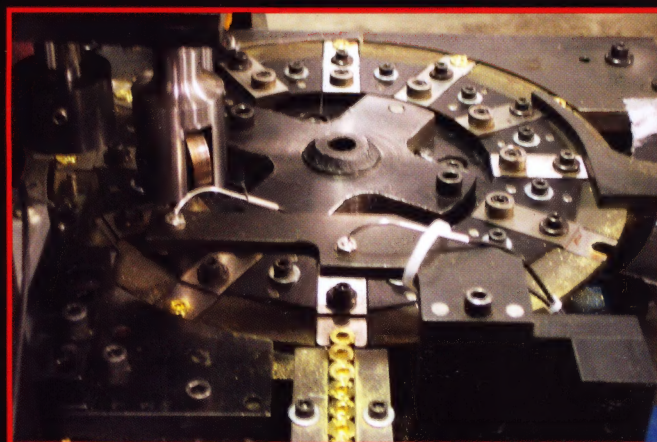

SinterFire 

International uses **Special Duty**[®] bullet components developed and patented by SinterFire[®], the originator of the sintered, powdered metal technology that uses exclusive copper/tin composite materials.

International worked to develop and manufacture a family of exclusive products to advance the lead-free frangible concept, beyond typical training concerns, to include tactical, duty, special purpose and military applications.

International Cartridge Corporation is a certified, Woman Business Enterprise, (WBE) located in Pennsylvania, USA.

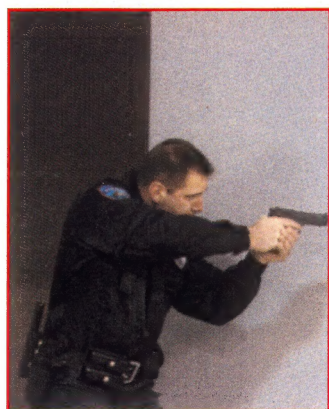

Special Purpose

Toll Free: 877-422-5332

Most officers train a lifetime for the possibility of having to shoot just once on duty. **International's Special Purpose** Training Ammunition was created to give officers the confidence to be capable of performing under high stress situations.

International Cartridge Corporation has developed a Frangible Lead-Free Special Duty Hollow Point. This ammunition is designed to create a safer more effective duty round for todays law enforcement. Conventional lead based duty rounds expand creating only one wound channel. International Cartridge's **Green Elite Duty** fragments and creates several wound channels giving a better chance for a one-shot stop. Additionally, **Green Elite Duty's** fragmentation properties significantly reduces the potential for damage/injury from ricochet.

Green Elite Duty

International's training rounds have been specifically designed to match the function and accuracy of our **Green Elite Duty** which allows for a seamless transition from training to duty.

Super Duty rounds are designed with tactical teams in mind. Today's law enforcement teams are faced with many more encounters with armored perpetrators. Our **Super Duty** ammunition gives the officer the advantage of a hyper velocity hollow point pistol cartridge for their entry weapons, without the risk of over penetration. **Super Duty** has the added benefit of a totally lead free, frangible projectile. This helps reduce collateral damage due to ricochets and eliminates lead contamination.

Training & Duty Rifle Ammunition

International's Training & Duty Rifle Ammunition is designed to deliver enhanced accuracy, with increased velocities at reduced pressures. In addition, the controlled fragmentation properties of the RTP (reduced tactical penetrator) allow tactical training on steel targets, which reduces splash-back and virtually eliminates damage to 1/4" AR 500 steel targets. Combined with the Lead-Free technology, the ammunition is designed for both training and duty applications.

Training & Duty RTP Rifle Ammunition is specifically designed for every day use in patrol rifles, as well as an elite tactical round for entry teams, SWAT teams and hostage barricade teams.

The controlled penetration technology, combined with the fragmentation properties, reduce the potential for injury / damage from shoot throughs and ricochet.

Toll Free: 877-422-5332

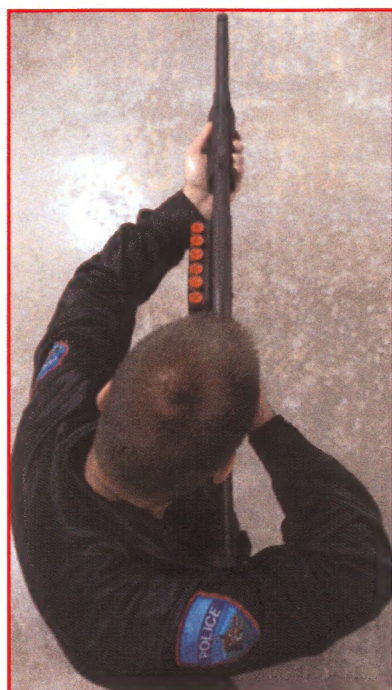

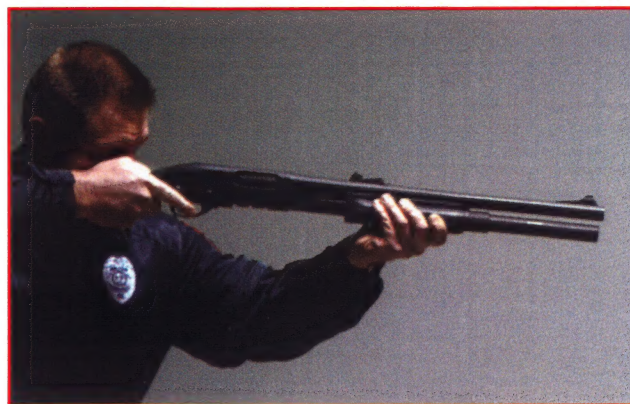

International's Frangible Shotgun Ammunition sets the standard in pattern size and low recoil. These frangible rounds are safe for use on 1/4" AR 500 steel, with reduced splash-back, and virtually eliminate damage to targets. Our rounds allow officers to train tactically in close-quarters, which was never possible with conventional rounds. Our ammunition will help create confidence with more realistic training scenarios.

"This ammo allows safe training, up close and personal, with steel targets"

International's Duty & Training Buckshot offers frangible buckshot in 9 pellet cartridges.

International's Duty & Training Shotgun Slug can also be used for up close training on steel. Lighter recoil and consistent accuracy give this frangible round a large advantage over conventional slugs.

International Cartridge Corporation

Ammunition Test Protocol

International ammunition was developed around the stringent requirements of the Ammunition Test Protocol. These procedures were carefully developed by ballistics experts to not only sufficiently test performance, but provide for accurate test repeatability. Law enforcement relies on results that save lives; not claims. "Seeing is believing". For information on the next ballistic demonstration in your area contact our office at the address and number listed below.

TEST PROTOCOL

Bare Gelatin.....SHOT AT TEN FEET
